## FEEDING DIRECTIONS

Wellness PERFORM SAFE™ is a low-starch, pelleted, 12% protein feed for active horses and ponies, to be fed along with good quality hay and/or pasture. Start the feeding program using the Daily Feeding Guide for the type of roughage fed and class of horse. After observing and/or weighing the horse for a period of time, increase or decrease the daily feeding rate to obtain the desired body condition or body weight.

Do not feed Wellness PERFORM SAFE™ on a free choice basis. Feed at regular times, with two or more equal feedings per day. Make all feed changes gradually, over a 7-10 day period. Increases in feeding rate should not exceed 1 pound per day for an individual horse. Delay feeding a horse that has been exercised or is exhibiting pain, fever or diarrhea. Wellness PERFORM SAFE™ weighs approximately 1.6 pounds per dry US quart. Feed hay and/or equivalent pasture at the rate of 1 or 2 pounds per 100 pounds of body weight daily. Provide a free choice horse mineral such as Seminole Grass Balancer 16:8 Mineral or Alfa Balancer 12:12 Mineral on continuous basis. Provide clean, fresh water at all times.
